

## Power | Extension |

Ideally we would not need power cords, as they restrict us in our mobility. As wireless energy is not within widespread use and at least for higher power is not expected anytime soon we developed the Extension. This product will allow you to extend your working space, as you can also have a power socket further away now.

As a regular extension cord is hardly new, we of course gave a different twist to it, and did so quite literally: you can switch the power on or off by revolving the power plug.

The Power | Extension | comes with a grounded 3m (10ft) cable, child-proof lock, and therefore is a very safe product. Combined with the unique on/off switch it creates a safe & smart alternative to standard extension cords. And as a regular socket is used, the Power | Extension | is compatible with all our other products, allowing you to create a set up that tailors to your needs.

technical specifications	
Voltage	230V
Cord length	3m
On/Off switch	yes
Outlets	1
Available socket types*	Type F, E
Standard colour	Orchid Purple

Type E

\* type G, type B and type I are expected soon
