

# How to use SecureLockMobile encryption software

## Overview

SecureLockMobile lets you easily secure your data with AES encryption. No installation is necessary, as you can run the software directly from your Buffalo drive.

How does it look like from a PC?

Until it's opened, the encryption box will be displayed with the icon at left. You will need the password in order to open the encrypted box.

## 1 Create an Encryption Box

If you've already created an Encryption Box, creating subsequent Encryption Boxes will be a little different. Refer to 'Create another Encryption Box' on the next page.

Creating an Encryption Box for the first time:

- 1 Connect the Buffalo drive to your PC.
- 2 If using a USB connection, open the drive in [My Computer].

icon will be in the folder. Click the icon.

3

Click [next].

4

Enter a name for the encryption box.

Click [next].

To choose a different location for the Encryption Box, click [Browse].

5

Move the slide bar to specify the capacity of the Encryption Box.

Select the encryption strength.

Click [Next].

6

Enter the password twice (use 1 to 63 alphanumeric characters).

Click [Next].

7

If desired, enter a password hint.

Click [Next].

8

Click [OK] to create an Encryption Box. This may take some time. Estimated time to create an Encryption Box is about 40 seconds per gigabyte with a USB 2.0 connection. With USB 1.1, it will take about 20 minutes per gigabyte. Do not exit SecureLockMobile until the screen in Step 9 is displayed.

9

When the Encryption Box is complete, the [Open] screen will be displayed.

## Create Additional Encryption Box

Please follow the steps below to create a new Encryption Box in addition to your existing Encryption box.

- 1 Connect the drive to your PC.
- 2 If using a USB connection, open the drive in [My Computer].

 icon will be in the folder. Click the icon.

- 3  Click [Cancel].

- 4  Click [Encrypt Box – Create new Box].

- 5 Repeat steps 3 - 9 from the front page.

## 3 Open Encryption Box and Retrieve Data

Please follow the steps below to open Encryption Box and retrieve data.

- 1 Connect the drive to your PC.
- 2 If using a USB connection, open the drive in [My Computer].

 icon will be in the folder. Click the icon.

- 3  Check the Encryption Box name.  
Enter the password.  
Right Click [OK].

You can specify the Encryption box by clicking the browse button.

- 4  Click the target data in the Encryption Box.  
Click [Take from Box] and specify the data folder.

Follow the instructions on the screen to specify the location to save the retrieved data. The decrypted data is copied to the PC. To delete the data in the Encryption Box, select the date to be deleted and click [Delete files].

## 2 Store data in Encryption Box

You can save data to Encryption Box by dragging data you want to encrypt to the SecureLockMobile window. It will prevent other people to view data stored in Encrypted Box.

- 1  Drag the data to encrypt.

**CAUTIONS!** It will take approximately 20 minutes to encrypt a 1 GB of file (70 minutes for USB1.1 connection). Please do not run other programs while data is encrypted since the computer is heavily loaded.

- 2 Click the [x] button in the upper-right corner of the window to close the Encryption Box. Your data is now protected.

## Delete Encryption Box

To delete an Encryption Box, select [Encrypt Box], [Delete Box], and then select the box to be deleted.

- 1  Choose [Encryption Box], then [delete Box].

## Notes

If an Encryption box has a capacity greater than 4GB, data will be stored in multiple files. Each file will be named filename.xxx, where xxx is a number. If any of these files are deleted, then you will not be able to open the Encryption Box.

Files larger than 4 GB may not be saved to an Encryption Box.
