## Hardware Installation

**STEP 1:** After removing the NPort 5600-8-DT from the box, place it on a desktop or other horizontal surface. Connect the 12-48 VDC power adaptor to the NPort 5600-8-DT's power input when using an AC power source, or connect the NPort 5600-8-DT's terminal block directly to a DC power source.

**STEP 2:** Use an Ethernet cable to connect the NPort 5600-8-DT to a network hub or switch. You can also connect directly to your computer's Ethernet port, which is convenient for initial configuration or testing.

**STEP 3:** Connect the NPort 5600-8-DT's serial port to a serial device.

### Wall or Cabinet Mounting

The NPort 5600-8-DT comes with two metal attachment plates to allow installation on a wall or the inside of a cabinet. First, attach the brackets to the back of the NPort with screws. Next, mount the unit on a wall or cabinet with screws. Screws should be less than 6.0 mm in head diameter, and less than 3.5 mm in shaft diameter.

### DIN Rail Mounting

DIN-rail attachments can be purchased separately to attach the product to a DIN-rail. The DIN-rail attachments should be oriented with the metal springs on top.

#### Standard Attachment

#### DK-35A Attachment

## Pull High/Low Resistors for RS-485

Use the set of DIP switches on the bottom panel to set the pull high/low resistor values for each serial port. To access the switches, remove the screws holding the DIP switch cover in place and flip open the cover. There are three DIP switches for each port's pull high/low resistors:

SW	1	2	3
	Pull High	Pull Low	Terminator
ON	1K $\Omega$	1K $\Omega$	120 $\Omega$
OFF	150K $\Omega$	150K $\Omega$	–
